

## VW CRAFTER 2017→

### Avec Radio Basic

Behind the original radio there is only space for a single din body radio, the lower section behind the radio has the ducts for the air vents. Careful attention needs to be payed to the radio that is to be fitted and the modifications that may be required, either to the fascia kit or the vehicle. We strongly recommend the installation is done by an experienced car audio technician only.

See the image below that shows the available space behind the original radio.
